

INSTRUCTIONS

Traditional dustbins require you to touch them with your hand or foot to open, which is both inconvenient and unhygienic. This automatic opening dustbin based on infrared technology removes this need. Simply hold your foot about 10cm near to the infrared panel and the lid will open automatically, dispose of the rubbish, and within 4-6 seconds it will close again automatically.

The automatically opening and closing control system consists of computer chips, infrared detecting device, mechanical transmitting device and electrical drive system. It is a high performance device, which is low in energy consumption and will give a long service-life.

Instructions:

1. Press the black button to open the top lid. Then open the battery compartment located inside of dustbin and insert 4pcs "AA" alkaline type batteries.
2. Turn on the power switch beside battery compartment. The red indicator light will stay on for 2 seconds, and then flash once every 6 seconds to show it is in working order.
3. When you need to open the bin hold your foot about 10 cm above the infrared panel. The lid will then open automatically within 0.5 seconds, and close again automatically within 4-6 seconds of moving your foot away. If you do not move your foot away the lid will stay open.
4. The indicator light in the normal waiting state flashes red (once every 6 seconds)
5. Alkaline batteries will last for 3 to 6 months on the basis the bin is opened or closed 20 times each day.

Attention:

1. Do not wash or immerse the lid of the bin, it may be cleaned with a damp cloth. The body of the bin may be washed.
2. Do not press the lid of the dustbin when it is opening.
3. Remove batteries once flat to avoid seeping liquid damaging the electronic components.
4. Avoid direct sunlight to the infrared panel.
